1. Executive Summary

Amplify Good is a platform built for Austin, TX that solves two connected problems: musicians being underpaid or not paid at all for their work, and non-profit organizations struggling to find musicians for their fundraisers and events.

Austin is the Live Music Capital of the World—yet the musicians who built that identity struggle to make a living, and the non-profits strengthening the community can't afford to book them. That's the Austin Paradox. Amplify Good's mission is to solve it by building the city's first automated community wealth engine: a platform where every paid booking circulates money back into the local arts and non-profit ecosystem automatically.

The mechanism is straightforward. Community members who want a musician for their event book through the platform and pay the musician's standard rate plus a 15% impact commission. That commission goes into a pool that funds musicians to perform at non-profit events—events that otherwise couldn't afford live music. Wealth preserves art, art drives social impact.

The platform should feel like a grassroots movement, not a corporate tool—ACL Festival meets local community.

---

2. Problem Statement

We call ourselves the Live Music Capital of the World, but here is the reality: Austin is a city overflowing with money and talent where the creators can't afford to live and the helpers are too busy to ask for help. That's the Austin Paradox.

2.1 For Musicians

- Musicians in Austin are frequently underpaid or perform for free at community and non-profit events.
- There is no centralized place where musicians can list themselves, set a professional rate, and be discovered by people looking to book live music.
- Musicians have no visibility into non-profit or charity gig opportunities that might actually pay.

2.2 For Non-Profits & Charities

- Non-profits host fundraisers, galas, and community events that deserve great live music—but every dollar spent on entertainment is a dollar pulled away from the cause itself. Most organizations are forced to choose between a memorable event and maximizing their impact.
- When entertainment is funded through the Amplify Good impact pool, non-profits keep 100% of their fundraising dollars directed at their mission. They get the energy and draw of live music without sacrificing a dime of donor contributions.

- Finding and booking musicians today is manual, unreliable, and time-consuming—an operational headache on top of an already stretched budget.

2.3 For Community Members

- People who want live music for their events have no single platform to discover local talent, see rates, and book.
- There is no awareness that their entertainment spending could also support local causes.

---

3. Solution Overview

Amplify Good is a three-sided marketplace connecting musicians, non-profits, and community members through a closed-loop impact exchange:

Wealth → Art → Impact

Musicians create a profile with their bio, genre, media, socials, and standard professional rate. They get discovered and booked.

Non-Profits register their organization and create events. The platform matches them with musicians paid from the impact pool—at zero cost to the non-profit.

Community Members browse events, discover musicians, and book talent for their own events. Their booking includes the musician's rate + a 15% impact commission (called a "donation" at checkout) that funds non-profit performances.

---

4. User Roles

Role	Who They Are	What They Do
Musician	Local ATX artist—solo act or band, any genre	Create a profile, set their rate, get booked for paid gigs and non-profit events
Non-Profit	Registered non-profit, charity, or community org	Post events, get matched with musicians at zero cost from the impact pool
Community Member	Austin residents, event hosts, anyone who needs a musician	Browse events, find and book musicians for their own events (paying musician rate + 15% donation), or sponsor a musician's set at a non-profit event
Admin	Amplify Good team	Manage seed data, moderate

		content, oversee the impact pool

5. Sign-Up & Onboarding

There are three distinct sign-up paths. Each collects only what's needed for that role.

5.1 Musician Sign-Up

Field	Required	Details
Name	Yes	Display name or band name
Email	Yes	Used for login and notifications
Password	Yes	Minimum 8 characters
Bio	Yes	Free-text, 500 character max. Who they are, what they play.
Genre	Yes	Select from predefined list (Rock, Jazz, Country, Hip-Hop, R&B, Mariachi, Classical, Electronic, Folk, Latin, Blues, etc.) with up to 3 custom tags.
Media	Yes	Upload or link music and videos. Accepts SoundCloud, Spotify, YouTube, Vimeo links. Up to 10 items.
Social Links	No	Instagram, Twitter/X, TikTok, Facebook, personal website.
Standard Professional Rate	Yes	Their rate for a gig—hourly or per-event. Visible to anyone booking them.
Profile Photo	Yes	Headshot or band photo.

5.2 Non-Profit Sign-Up

Field	Required	Details
Organization Name	Yes	Official name of the non-profit or charity
Bio / Mission	Yes	What the org does, who they serve. 1000 character max.
Website	Yes	Link to their official site
Logo Upload	Yes	Displayed on the non-profit directory and their

		profile
Contact Email	Yes	Primary point of contact
Password	Yes	Minimum 8 characters

5.3 Community Member Sign-Up

Field	Required	Details
Name	Yes	Display name
Email	Yes	Used for login, booking confirmations
Password	Yes	Minimum 8 characters

Community members have the simplest onboarding—get them signed up and into the platform fast.

---

6. Musician Features

After signing up, musicians land on their profile page which doubles as their public-facing profile.

6.1 Profile Page

- Displays bio, genre tags, profile photo, media gallery, social links, and standard rate.
- Media gallery renders embedded players for linked audio/video (SoundCloud, Spotify, YouTube).
- Social links displayed as clickable icons.
- Rate displayed prominently—this is the musician's Living Wage Floor. Every gig on the platform, whether it's a private booking or a non-profit event, pays them their full professional rate. Community members see this rate before the 15% commission is added.
- Musicians can edit all profile fields at any time.

6.2 Booking Requests

- Musicians receive booking requests via email notification and in-app.
- Each request shows: event name, date, location, expected attendance, and the payout amount.
- Musician can accept or decline.
- Once accepted, the event is confirmed and the musician is paid after the event.

6.3 Musician Dashboard

The musician dashboard is the musician's home base after login. It shows everything they need at a glance:

- Incoming booking requests with accept/decline actions.
- Upcoming confirmed gigs with event details (date, venue, event name, payout amount).
- Past gigs with earnings history.
- Total earnings summary (lifetime earnings, impact gigs played, private gigs played).
- A notification badge showing unread requests (e.g., "2 new booking requests").
- Quick link to edit their profile.

---

7. Non-Profit Features

After signing up, non-profits land on their organization dashboard.

7.1 Event Creation Form

Non-profits can create events by filling out the following form:

Field	Required	Details
Event Name	Yes	Name of the fundraiser, gala, community event, etc.
Date & Time	Yes	When the event takes place
Venue / Location	Yes	Address or venue name
Vibe / Theme	Yes	What's the feel? (e.g., "casual outdoor BBQ," "formal gala," "block party")
Expected Attendance	Yes	Approximate number of guests
Genre of Music	Yes	What genre fits the event (same genre list as musician profiles)
Description	No	Any additional details about the event
Cause / Category	Yes	The non-profit's cause area (e.g., Youth, Environment, Healthcare, Animal Rescue, Arts & Culture). Used for event search filtering.

7.2 Musician Discovery & Matching

Non-profits have two ways to find a musician for their event:

Algorithmic Suggestions

After a non-profit submits an event, the platform automatically suggests up to 3 musicians whose genre and style match the event's vibe. The non-profit reviews the suggestions and can confirm their pick directly. This is the fastest path—zero effort, instant matches.

Browse & Search

Non-profits can also browse the full musician directory themselves. The directory supports the following search and filter options:

Filter	How It Works
Genre	Filter by one or more genres (Rock, Jazz, Folk, etc.). Shows only musicians who match.
Rate Range	Set a minimum and maximum rate to find musicians within the impact pool's budget or a sponsor's contribution.
Name Search	Search by musician or band name directly.
Availability	Filter by date to see only musicians who are available on the event date.

Whether a non-profit selects a musician from the suggestions or finds one through search, the booking works the same way: the musician is paid from the impact commission pool at their full professional rate—zero cost to the non-profit.

7.3 Organization Dashboard

- List of their created events with status (upcoming, past, draft).
- For each event: confirmed musician, RSVP count, event details.
- Ability to edit or cancel upcoming events.

---

8. Community Member Features

After signing up, community members land on the community home page where they can browse events, find musicians, or sponsor a set.

8.1 Browse & Search Events

The community home page showcases upcoming events across the platform—both non-profit fundraisers and community events. Community members can search and filter to find events that interest them:

Filter	How It Works
Date	Filter by date range or specific day to see what's coming up.
Genre	Filter by music genre to find events with the type of music you want to hear.
Cause / Category	Filter by the non-profit's cause area (e.g., Youth, Environment, Healthcare, Animal Rescue, Arts & Culture).
Keyword Search	Search event names, descriptions, or hosting organization names.

From any event listing, community members can RSVP, view the performing musician's profile, or choose to sponsor the set.

8.2 Find a Musician

Community members who want a musician for their own event (birthday, wedding, corporate event, house party, etc.) use the "Find a Musician" flow:

1. Search the musician directory using the following filters:

Filter	How It Works
Genre	Filter by one or more genres to find the right sound for your event.
Rate Range	Set a budget range to see only musicians within your price point.
Name Search	Search by musician or band name if you already know who you want.
Availability	Filter by your event date to see only musicians who are free.

1. View musician profiles (bio, media, rate, socials).
2. Click "Request Booking" to open a booking request form. The community member fills out their event details:

Field	Required	Details
Event Name	Yes	What's the occasion (e.g., "Sarah's 30th Birthday")
Date & Time	Yes	When the event takes place
Venue / Location	Yes	Address or venue name
Duration	Yes	How long they need the musician (e.g., 2 hours, 3 hours)
Message to Musician	No	Any additional details, special requests, or questions for the musician

3. The musician receives the request and can accept, decline, or reply with a message to discuss details.

4. Once the musician accepts, the community member proceeds to checkout: Musician's Rate + 15% Impact Commission (Donation) = Total.
5. The donation portion goes into the impact pool to fund non-profit events.

This is the core revenue mechanism. Every time a community member books a musician, they're also funding live music at a non-profit event.

8.3 Sponsor a Musician ("Adopt an Artist")

Beyond booking a musician for their own event, community members can directly sponsor a musician's performance at a non-profit event. This is the "Adopt an Artist" flow—inspired by the blueprint's corporate sponsorship model, but opened up to any community member who wants to contribute.

- From a musician's profile or from a non-profit event listing, a community member can choose "Sponsor This Set."
- They pay the musician's full professional rate directly. The musician performs at the non-profit event at zero cost to the organization.
- The sponsor is recognized on the event page as the "Impact Sponsor" for that performance.
- This gives community members a way to directly fund the impact loop beyond the passive 15% commission—turning anyone into a patron of Austin's music scene.

---

9. Brand & Design System

All design work must follow the Amplify Good brand identity. The platform should feel like a grassroots Austin festival—ACL Festival meets local community—not a corporate SaaS tool. Below are the specifications a developer or designer needs to build on-brand.

9.1 Color Palette

Primary Colors

Name	Hex	Usage
Azure	#21639F	Primary brand color. Headers, CTAs, links, navigation, trust elements.
Texan Sienna	#BF5700	Secondary accent. Sub-headings, highlights, warm accents. The "Burnt Orange" legacy.
Orange (ACL)	#FFB700	Energy color. Primary action buttons, badges, hover states, active indicators.
Light Blue	#DFEEFB	Backgrounds, card fills, light surfaces. Keeps the UI airy and clean.

Extended Festival Palette (Accents & Categories)

Name	Hex	Usage
Desert Turquoise	#00A6A3	Success states, impact metrics, positive indicators.
Dusk Purple	#4D1378	Premium accents, special event badges, evening-themed elements.
Gold Rush	#FBB03B	Impact pool visuals, financial summaries, earnings displays.
Hill Country Green	#348F41	Community tags, eco/outdoor event markers, growth indicators.

No black backgrounds. No vivid crimson. The palette evokes an Austin sunset and Hill Country landscape—warm, vibrant, and inviting.

9.2 Typography

Role	Font	Usage
Display / Headers	Anton	All headings, hero text, bold impact statements, calls to action. Use ALL-CAPS for primary CTAs. Mimics the ACL festival poster style—condensed, bold, energetic.
Sub-Headers	League Spartan or Montserrat Bold	Secondary headings, section labels, navigation items.
Body Text	Open Sans	All body copy, form labels, descriptions, partner profiles, event details. Clean, highly legible, friendly for long-form content.

9.3 Iconography & Illustration

- Vector-style, hand-drawn illustrations only. The icon library includes: Longhorns, Armadillos, Guitars, Cacti, the Capitol Dome, Festival Guitar, Austin Skyline, Saguaro Cactus, Civic Spark Sunburst, and Rhythmic Notes Motif.
- The hero logo is a Microphone-Fist inside a shield with a lightning bolt (“Civic Spark”).
- Distressed textures used sparingly for character, not decay. The look is gritty-but-clean—festival poster, not vintage filter.
- All icons use the four primary brand colors (Azure, Texan Sienna, Orange, Light Blue).

9.4 UI Components

- Backgrounds: Use Light Blue (#DFEEFB) or off-white paper textures. Avoid dark mode or black corporate looks.

- Cards: Rounded corners, light borders, white or light blue fill. Used for event listings, musician profiles, and dashboard items.
- Buttons: Rounded corners or “badge” styles that evoke festival wristbands or backstage passes. Primary actions in Orange (#FFB700), secondary in Azure (#21639F) outline.
- Profile photos: Displayed in circular frames for musicians.
- Genre tags: Pill-shaped badges in Light Blue with Azure text.
- Impact metrics: Use Gold Rush (#FBB03B) for financial numbers and pool balances.

9.5 Brand Voice

Energetic, urgent, and unapologetically optimistic. Bold, grassroots, and action-oriented. The tone inspires community by turning up the volume on social change. We speak with authoritative hope and infectious energy.

- Energetic: Copy should feel lively and active, reflecting Austin’s music culture.
- Grassroots: Language should be accessible, community-driven, never corporate-speak.
- Optimistic: Frame challenges as opportunities; lead with possibility.
- Bold: Strong calls to action, confident positioning.

Wording rule: Use “Amplify the Good” in all user-facing copy. Never “Join the Engine,” “Booking Software,” or “Financial Hub.”

---

10. Landing Page

The main landing page is the first thing anyone sees when they visit Amplify Good. It is intentionally simple—a clean, focused entry point that puts the brand front and center and gets users into the platform fast. No scrolling, no content overload. Just the logo, three clear paths, and a way in.

10.1 Layout

The page centers the Amplify Good logo with the tagline “Amplify the Good City-Wide” and presents three sign-up options:

I’m a Musician — Create your profile, set your rate, and get booked.

I’m a Non-Profit — Post events and get matched with musicians at zero cost.

I Need a Musician — Browse events, book musicians, or sponsor a set.

Below the three sign-up paths, a small “Already have an account? Log in” link for returning users.

10.2 Design Notes

- The page should feel like a grassroots festival—ACL Festival meets local community. Not corporate.

- The logo is the hero element. No event feeds, no partner logos, no content below the fold. The goal is zero friction to sign-up or login.
- Each sign-up option should include a short one-line description of what that role gets, making the choice obvious.
- Event feeds, musician directories, and partner showcases live on role-specific pages after login—not on the landing page.

---

11. Booking & Payments

11.1 How Booking Works

When a community member books a musician:

1. They find a musician through search and click “Request Booking.”
2. They fill out the booking request form with event details (name, date, location, duration) and an optional message.
3. The musician receives the request on their dashboard and via email. They can accept, decline, or reply with questions.
4. Once the musician accepts, the community member is notified and proceeds to checkout.
5. The checkout page shows: Musician’s Rate + 15% Impact Commission (Donation) = Total.
6. Payment is processed via Stripe.
7. The musician’s rate goes to the musician (via Stripe Connect direct payout).
8. The 15% donation goes into the Amplify Good impact pool.
9. Both parties receive a confirmation.

11.2 Impact Pool

The impact pool is an internal fund that aggregates all 15% donations from community bookings. When a non-profit creates an event and a musician is matched, the musician is paid from this pool at their standard rate. If the pool balance is insufficient, the event is queued until funds are available.

11.3 Payment Infrastructure

Component	Details
Payment Processor	Stripe (Stripe Connect for musician payouts)
Musician Onboarding	Musicians connect their bank account via Stripe Connect during sign-up or before their first booking
Checkout	Community member pays via credit/debit card
Payout Timing	Musicians paid within 2–7 business days after event completion

Refund Policy	Full refund if cancelled 48+ hours before event; 50% within 48 hours; none after event start

12. Seed Data Strategy

At launch, the marketplace needs enough supply on both sides to be useful. The platform will be pre-loaded with seed data.

12.1 Seed Musicians

Pre-load 20+ musician profiles across a variety of genres. These are real local ATX musicians who have agreed to be listed. Profiles should be fully complete (bio, media, rate, photo) so the platform feels active from day one.

12.2 Seed Non-Profits

Pre-load 10+ non-profit partner profiles with logos and bios. These are available to create events immediately.

13. Information Architecture

13.1 Sitemap

/ — Landing Page (logo, three sign-up paths, login link)

/signup — Role selection → role-specific sign-up form

/login — Authentication

/home — Community home (event feed, featured musicians, partner logos — shown after login)

/musicians — Musician directory (search by genre, filter by rate)

/musicians/:id — Individual musician profile

/events — Event listing (upcoming events, filterable)

/events/:id — Event detail page

/events/new — Event creation form (non-profit only)

/dashboard — Role-specific dashboard (musician bookings, non-profit events, community member history)

/book/:musicianId — Booking & checkout flow

/sponsor/:eventId — Sponsor a set checkout flow

/admin — Admin panel (user management, seed data, impact pool)

14. Revenue Model

Revenue Stream	Description
15% Impact Commission	Charged on every community member booking, on top of the musician's rate. This is the primary revenue/impact mechanism. Framed to the user as a "donation" that funds non-profit events.
Direct Sponsorship ("Adopt an Artist")	Community members pay a musician's full rate to "Sponsor a Set" at a non-profit event. 100% of the payment goes to the musician; the non-profit pays nothing. This supplements the impact pool with direct, targeted funding.
Stripe Processing Fees	Standard Stripe fees (~2.9% + $0.30) passed through or absorbed—to be decided.

Non-profits are never charged. Their musician bookings are funded entirely from the impact pool.

15. Data Model

15.1 Core Entities

Entity	Key Fields
User	id, email, password_hash, role (musician | nonprofit | community | admin), created_at, email_verified
MusicianProfile	user_id, display_name, bio, genre_tags[], photo_url, media_links[], social_links{}, standard_rate, rate_type (hourly | per_event), stripe_connect_id
NonProfitProfile	user_id, org_name, bio, website_url, logo_url, contact_email
CommunityProfile	user_id, display_name
Event	id, nonprofit_id, name, date_time, venue, vibe, expected_attendance, genre_pref, description, status (draft | published | completed | cancelled), musician_id (nullable)
Booking	id, musician_id, community_member_id, event_date, location, duration, musician_rate, commission_amount, total_charged, status (pending | confirmed | completed | cancelled), stripe_payment_intent_id

ImpactPool	id, balance, total_inflows, total_outflows, last_updated
Transaction	id, booking_id, type (commission_in | musician_payout | np_gig_payout), amount, timestamp

16. Technical Architecture

16.1 Recommended Stack

Layer	Technology	Why
Frontend	Next.js (React) + Tailwind CSS	SSR for SEO on landing/event pages; Tailwind maps to brand design tokens
Backend	Next.js API Routes	Unified JS stack; serverless-friendly
Database	PostgreSQL (via Supabase or Neon)	Relational model fits the data well; full-text search for musician discovery
Auth	NextAuth.js or Supabase Auth	Email/password with role-based access; OAuth optional for Phase 2
Payments	Stripe Connect	Built for marketplaces—split payments, onboarding, direct payouts
File Storage	Cloudflare R2 or AWS S3	Profile photos, non-profit logos
Hosting	Vercel	Zero-config deploys, edge functions, pairs natively with Next.js

16.2 Key Integrations

- Stripe Connect: Split payments (musician payout + commission to platform pool).
- Spotify/SoundCloud/YouTube oEmbed: Embedded media players on musician profiles.
- SendGrid or Resend: Transactional emails (booking confirmations, event notifications).

17. MVP Scope & Phasing

Phase 1 — MVP (Weeks 1–8)

Get the core loop working: musicians list themselves, community members book them, non-profits create events and get matched.

- Role-based sign-up (Musician, Non-Profit, Community Member).
- Musician profile creation (bio, genre, media, socials, rate, photo).
- Non-profit profile creation (bio, website, logo).
- Event creation form for non-profits (date, vibe, attendance, genre).
- Landing page: logo, tagline, three sign-up paths (Musician, Non-Profit, Community Member), and login link.
- Musician search and filtering (genre, rate).
- Community member booking flow with Stripe checkout (rate + 15% donation).
- Impact pool tracking (money in, money out).
- Basic genre-based musician matching for non-profit events.
- Seed data: 20+ musicians, 10+ non-profits pre-loaded.
- Admin panel: manage users, seed data, view impact pool balance.

Phase 2 — Growth (Weeks 9–16)

- Email notifications (booking requests, confirmations, event reminders).
- Non-profit event dashboard (event status, confirmed musician, RSVPs).
- Community member dashboard (booking history, total impact contribution).
- Musician dashboard (upcoming gigs, earnings, booking history).
- OAuth sign-in (Google, Apple).
- Improved matching algorithm (rate filtering, availability).
- Event RSVP functionality for community members.

Phase 3 — Scale (Weeks 17–24)

- Musician reviews/ratings from event hosts.
- Impact receipts for community members (“Your booking funded 2 hours of live music at Austin Food Bank’s Gala”).
- Mobile-responsive PWA optimization.
- Analytics dashboard for admins (user growth, booking volume, pool health).
- Expansion planning beyond ATX.

---

18. Success Metrics

Metric	6-Month Target	How We Measure It
Registered Musicians	100+	Complete profiles with rate and media
Registered Non-Profits	25+	Profiles with logo and bio
Community Bookings Completed	50+	Paid bookings through the platform

Impact Pool Total	$5,000+	Total 15% commissions collected
Non-Profit Gigs Funded	15+	Events where musicians were paid from the pool
Booking Conversion Rate	>20%	Visitors who view a musician profile and complete a booking
Monthly Active Users	500+	Users who log in and take an action per month

19. Risks & Mitigations

Risk	Severity	Mitigation
Cold start—not enough musicians or events at launch	High	Seed with 20+ musicians and 10+ non-profits. Host a launch event. Partner with local music orgs.
Musicians get booked off-platform after being discovered	Medium	Make the platform valuable beyond discovery: easy payments, non-profit gig access, exposure. Keep the 15% commission transparent and tied to impact.
Impact pool runs dry before non-profit events are funded	Medium	Monitor pool balance; queue non-profit events when low. Phase 3: explore corporate sponsorship as a supplementary funding source.
Payment disputes or musician no-shows	Medium	Hold payment via Stripe until event confirmation. Clear cancellation and refund policy.
Low community member sign-ups	Medium	Landing page is clean and focused—three clear paths with zero friction to sign-up. Reduce barriers to first booking after login.

20. Demo Scope — Alpha City Limits Pilot

The first build of Amplify Good is a clickable prototype with mock data, designed to demonstrate the platform’s core loop at the Alpha City Limits festival (May 31, 2026). The demo is not a production app—it’s a proof of concept that shows musicians, non-profits, and community members what the experience feels like.

19.1 What’s Real in the Demo

- All page layouts, navigation, and UI components are fully designed and clickable.
- Landing page with logo, tagline, and three sign-up paths.
- Role-specific sign-up forms (musician, non-profit, community member) with all fields.
- Musician profiles with bio, genre tags, media embeds, social links, and rate.
- Musician directory with search and filter UI (genre, rate range, name, availability).
- Non-profit dashboard with event list and musician suggestion panel.
- Event creation form with all fields.
- Community member event feed with search and filter UI (date, genre, cause, keyword).
- Booking request form with event details and message field.
- Musician dashboard with incoming requests, upcoming gigs, and earnings summary.
- Checkout page showing rate + 15% impact commission breakdown.
- Sponsor a Set flow from musician profile and event listing.

19.2 What’s Mocked

- All data is pre-loaded (5 seed musicians, 5 seed non-profits, 3–5 sample events). No real user registration or database.
- Search filters display results from mock data—filters visually work but pull from a static set.
- Booking requests don’t send real emails or notifications. The musician dashboard shows a mocked “2 new requests” badge.
- Messaging between community members and musicians is a mocked thread (pre-written messages displayed in a chat-style UI).
- Checkout does not process real payments. The Stripe checkout page is a styled mockup showing the payment breakdown.
- Impact pool balance and transaction history are pre-set static numbers.
- Algorithmic musician suggestions for non-profit events are a pre-selected list, not a real matching algorithm.
- Availability filtering shows all musicians as available—no real calendar data.

19.3 Demo Walkthrough Paths

The demo should support three guided walkthroughs, one per role:

Musician Path: Landing page → Sign up as musician → See completed profile → Open dashboard → View incoming booking request → Accept → See upcoming gigs and earnings.

Non-Profit Path: Landing page → Sign up as non-profit → See org dashboard → Create event (form pre-filled) → View 3 suggested musicians → Confirm pick → See event with confirmed musician.

Community Member Path: Landing page → Sign up as community member → Browse events → Find a musician → View profile → Request booking (fill form) → Musician accepts → Checkout with rate + 15% → Confirmation.

19.4 Seed Data for the Demo

Data Type	Count	Details
Musicians	5	The 5 founding artists for Alpha City Limits. Complete profiles with real bios, photos, media links, and rates. Genres should cover a range (e.g., Jazz, Folk, Rock, Latin, Blues).
Non-Profits	5	Real Austin non-profits who have agreed to participate. Complete profiles with logos and bios.
Events	3–5	A mix of upcoming non-profit events and the Alpha City Limits festival event itself. Pre-filled with dates, genres, and matched musicians.
Bookings	2–3	Sample completed bookings showing the full flow: community member booked a musician, 15% went to pool, receipt generated.
Impact Pool	1	Pre-set balance showing accumulated commissions and payouts to date (e.g., $1,200 in, $800 out, $400 available).

AMPLIFY THE GOOD CITY-WIDE

ACL Festival Meets Local Community
